- PDF & CCDA UPLOAD AVAILABLE IN ANY EMR

COMPANY PROFILE

Sargas Pharmaceutical Adherence and Compliance (SPAC) International has developed innovative software and m Health applications to keep physicians and patients engaged from the time a script is initiated through the entire treatment process. This team approach to treatment management enables patients to reap the maximum benefits and get the best outcomes, while reducing costs to the healthcare system. The HIPAA Compliant Cloud Portal allows in real time, patient's critical health information exchange among various providers.

SPAC believes any efforts to improve the patient's experience in accessing and taking their medications must be highly integrated with their physician's office. Providing any patient services that do not begin with their physician leads to confusion for the patient and all other service providers. Therefore SPAC has coordinated its patient centered solutions with the physician and their staff such that they are aware and have some control over their patient's experiences.
