

About RPM

Remote Physiologic Monitoring (RPM) allows you to review patient generated real time physiological data i.e. heart rate, blood pressure, blood glucose, Pulse Oximetry, weight, BMI, symptoms, step activity etc. You are also able to time track each medication the patient is taking. Our case managers will input medications and activate your patient's mobile application in order to give the patient reminders. You get to capture Medicare-approved CPT code 99453 (\$21 for enrolling), 99454 Initial supply of device, programmed alerts transmission each 30 days (\$69) and 99457 (\$54) for twenty minutes of reviewing this data for each patient every month by your clinical staff. The average potential with 500 Medicare patients enrolled in RPM is about \$50,000 per month or \$600,000 annually. Additionally you can capture Chronic Care Management for these same patients and have another 250k in revenue.

No Up-front Costs Enroll Now

To Sign up for Chronic Care Management and Remote Physiologic Monitoring, please go to www.spacinternational.com/sign-up-physician.php and we will call you and help you execute your agreement or call 844-926-CARE for more information.

Stay informed about your patient's health *in between visits!*

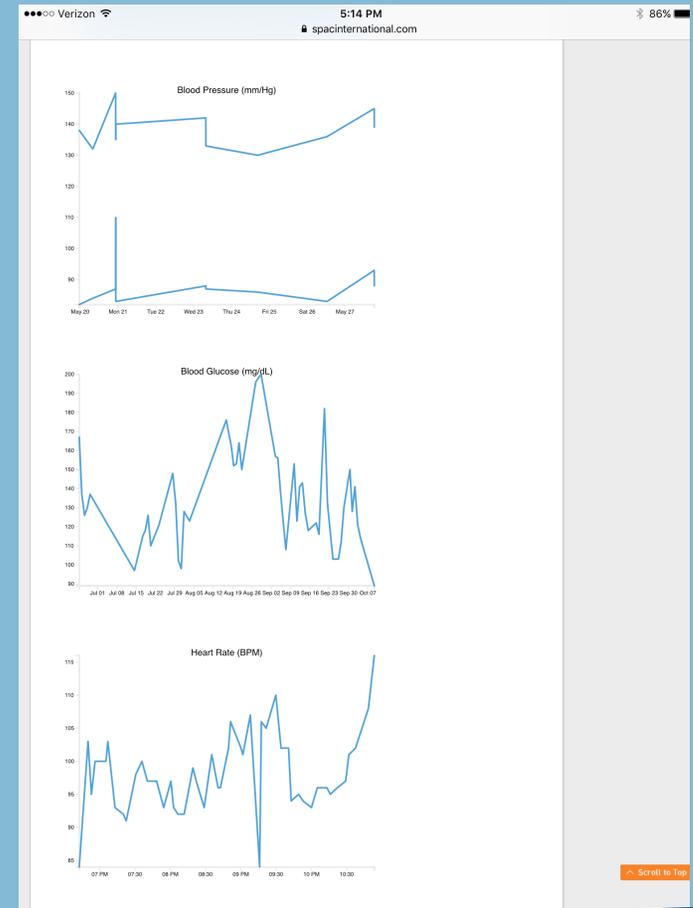

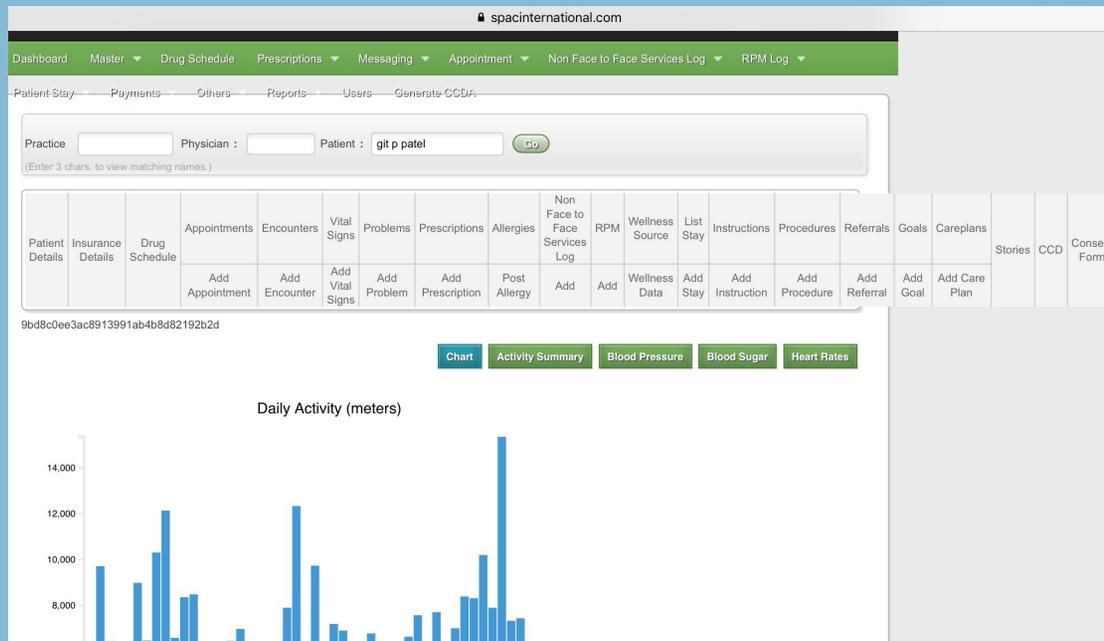

Chronic Care Remote Physiologic Monitoring (RPM) enables the collection of patients' health data, such as vital signs, weight, blood pressure, blood sugar, blood oxygen levels, heart rate and electrocardiogram readings to improve patient outcomes and quality of care while reducing hospitalizations and healthcare costs.

Drug Adherence®

How you monitor your patient's physiological data:

How to Enroll

After you receive verbal consent from your patient, he will receive an email from his Sargas case manager with additional steps and information for completing enrollment into remote patient monitoring. You will be one step closer to providing even better care for your patient just by remotely monitoring them!

Advantages of RPM

- Proactive care
- Real time monitoring of daily patient activities
- Stay informed about areas of concern to allow intervention when help is needed. (i.e. blood pressure, glucose & activity levels)
- User friendly apps that capture real time wellness information about the patient
- Monitor patients' health data via our portals and mobile applications
- Establish digital connectivity with your patient and his real time physiological data.
- Increase your bottom line by using Medicare approved CPT codes: 99091, 99453, 99454, 99457, 99458
